

Le point sur le travail réalisé :

I made some images, for characters and background. I helped (a little) Morgan to do the Character Selection Panel

Les difficultés rencontrées :

Implements the background images, because I had problem with Visual Studio to search the right .cpp files

La remédiation :

Time, a lot of time to search the files ...

Les objectifs à atteindre :

Finish all the graphics (there's still images to do ... I'm late). And improve the Character Selection Panel (I've got an idea of a « shop » which allows the user to customize his character, but it's kind of complex to implement)
